

Pamela Guy, DVM

Small Animal Outpatient

Pamela Guy is an Assistant Professor in the Department of Clinical Sciences at Tuskegee University School of Veterinary Medicine. Dr. Guy received her DVM in May of 1986 at Tuskegee University School of Veterinary Medicine. She completed a clinical residency in Toxicology at the University of Georgia, Athens Georgia in the year 1990.

The outpatient service provides preventative care to small animals and pocket pets. This would include immunizations, de-worming protocols, internal parasite and external parasite control, also Elisa screening for infectious diseases. Out-patient medicine includes: obedience and behavior medication training for the canine patient as well as communication modules for veterinary students. Finally, humane euthanasia services are supplied to the public when necessary.

Special Interest :

My first interest is an educator. I love to teach the professional art of veterinary medicine to our young upcoming veterinarians of the 21st century. My interest academically include small animal theriogenology, feline infectious diseases, preventative medicine through the out-patient services, emergency medicine, and last but not least, small animal toxicology.
